

EP Parasol

Product Overview and Dimensions

EP Parasol

Air-purifying Parasol - fully recyclable.
Environmental responsibility, sleek aesthetics and high performance epitomises this award winning commercial parasol with genuine green credentials.
Ideal for Hotels, Resorts and Restaurants.

Sustainability Award Nestlé 2020

Lacquered aluminium centre pole parasol with 4 spokes. Easy push-up opening system with an open-lock handle. For use in the hospitality sector. Without valance and with air vent. Olefin fabric with purifying air treatment. Use on stable and flat surfaces. Close in case of strong wind streaks. Avoid aggressive cleaning products.

EP- is an eco-friendly, water-based spray. It coats the surface of the fabric. This uses photocatalysis -a process where light energy triggers a chemical reaction. This reaction turns the surface into a self-cleaning air purifier. It breaks down pollution, dust, and bad smells.

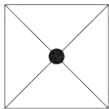

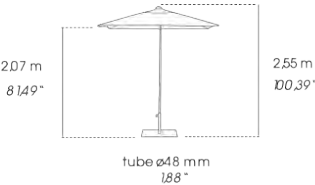

Here is how it works: The Trigger: Sunlight or normal indoor light hits the coated surface - The Action: The coating turns moisture in the air into safe cleaning agents. The Result: These agents destroy dirt and harmful gases. Think of it as like adding a mini solar-powered sponge to your windows and curtains. The sponge catches and destroys bad stuff in the air using only light - EP - CLEAN AND FRESH.

SIZES

Without a valance - with an air vent

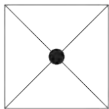

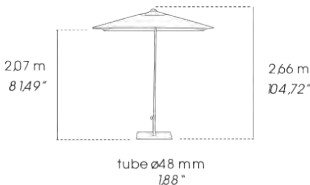

200x200

200x200 cm
78.74 X 78.74"

4 spokes
(20x14mm) -
(0.78x0.55)

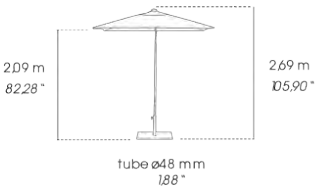

250x250

250x250 cm

Easy open / closing system

Locking lever

Spokes are without screws for easy replacement

Strong spoke to strut joint

OLEFIN FABRIC

Olefin - 190 GSM (grams per square metre), with added Pureti coating. UPF80. Colour fastness: 7-8/8).

Olefin fabric is a highly durable textile, woven from polypropylene. It is lightweight, water-repellent and highly resistant to stains, fading and mildew. It is a popular choice for parasol and marine membranes, because it dries quickly. It is also highly resistant to sunlight because the colour pigment is set into the thread of the fabric more intensely than in other processes. Depending on the colour, the durability of colour intensity varies when exposed to sunlight. The UV standard 801 certification rating of UPF 80 guarantees skin protection against harmful effects of UV rays on the skin - 100% recyclable.

White

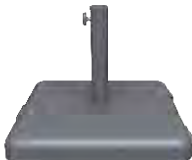

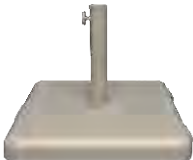

Taupe

Anthracite

BASES

The base is colour matched to the fabric.

Weight: 50Kg- ensures stability.

Mobility: A pair of rollers allow the base to be re-positioned with ease.
